The program of Master of Surgery (Orthopedics) is offered to produce more experts in the field of Orthopedics to meet the high demand for public and private sectors of professionals' human resources with the expertise in the field of Orthopedics thereby reducing the ratio of orthopedics specialists to the population.

The program can also increase the number of academics for the doctoral program in the field of orthopedics medicine in the public or private institutions. The program also provides career advancement opportunities to the surgical medical officers in Malaysia with the existence of more specific training opportunities.

The program aims to increase the number of orthopedics specialists who are able to conduct relevant research-related health problems in the field of Orthopedics in Malaysia.
